FULL-STACK SOFTWARE DEVELOPER

CAREER OBJECTIVE

Experienced Full-Stack Software Developer with 4 years of hands-on professional experience designing, building, and maintaining enterprise-grade SaaS, ERP, POS, and high-traffic web applications. Core technical stack revolves around PHP, Laravel, MySQL, Redis, RESTful APIs, and containerized Docker/Linux VPS deployment workflows. Highly specialized in multi-tenant system design, database query optimization, secure payment gateway integrations, SMS gateways, third-party APIs, and asynchronous queue processing delivering clean, maintainable, and scalable code that drives real business value.

MY SKILLS

Backend & Frameworks:

- Strong OOP-based modern PHP development adhering to SOLID principles
- Enterprise Laravel Architecture: Queues, Horizon, Events & Listeners
- Feature flags, Attributes, Queue Routing & AI SDK integrations
- Clean MVC architecture, Repositories & Service Design Patterns

Database & Caching:

- MySQL high-concurrency schema design & transaction isolation levels
- Query optimization using EXPLAIN, composite indexes & eager loading
- Redis caching strategies, async queues & Redis Pub/Sub messaging
- Database partitioning, deadlocks resolution & multi-tenant isolation

Frontend & UI Architecture:

- Alpine.js, JavaScript (ES6+), jQuery, AJAX
- Tailwind CSS, Bootstrap, Blade Templating Engine
- Responsive UI interfaces, interactive DataTables & dashboards

DevOps & Cloud Infrastructure:

- Docker & Docker Compose containerized staging/production setups
- Linux VPS & Ubuntu server administration, Nginx reverse proxy tuning
- GitHub Actions automated CI/CD pipelines & zero-downtime deploys
- Supervisor process management, Let's Encrypt SSL, Bash scripting

Integrations & Third-Party APIs:

- Payment Gateways: Multi-gateway integrations, webhooks & idempotency
- SMS & Third-Party APIs: SMS gateways, courier APIs & notifications
- Real-time: WebSockets, WebRTC live audio/video calling & Redis Pub/Sub
- API Architecture: Versioned RESTful APIs with Sanctum, JWT & Postman

JOB EXPERIENCE

SR. Software Developer — **2025-Present**

WanIT BD LTD (Dhaka, Bangladesh)

- Led backend development for high-scale enterprise ERP, inventory, and accounting systems; designed high-concurrency MySQL schemas with optimized transaction isolation.
- Offloaded heavy report generation and data exports to Redis queue workers, reducing API response times by 42%.
- Implemented secure payment gateways with webhook signature verification, fraud prevention, and idempotency controls.
- Configured Dockerized production environments, managed Nginx on Linux VPS, and architected zero-downtime CI/CD deployment pipelines using GitHub Actions.
- Championed coding standards, conducted peer code reviews, and mentored junior team members in writing clean, performant Laravel code.

Software Developer — **2023-2025**

Deelko LTD (Dhaka, Bangladesh)

- Engineered retail POS software featuring barcode integration, multi-branch stock tracking, low-stock reorder triggers, and receipt printing.
- Built ERP modules to automate workflows, improve operational efficiency, and streamline inventory auditing across branches.
- Developed an alumni directory system with real-time filtering and infinite scrolling using Laravel, Alpine.js, and Tailwind CSS.
- Optimized legacy MySQL database queries through strategic indexing and eager loading techniques.
- Integrated automated SMS gateways, email notifications, and webhook listeners for transactional billing and security alerts.
- Maintained containerized staging and production Linux VPS servers, executing routine performance monitoring and log analysis.

Laravel Developer — **2022-2023**

Softvence Agency (Dhaka, Bangladesh)

- Built web applications for international clients, including booking portals, job marketplaces, and e-commerce platforms with RBAC support.
- Designed versioned REST APIs secured with Laravel Sanctum and JWT for web and mobile frontends.
- Collaborated in international Agile teams, participating in daily standups, sprint planning, Git branching strategies, and automated PHPUnit testing.
- Optimized database indexing and server-side caching strategies across multiple client projects to enhance overall system responsiveness.

PROBLEM SOLVING & SOFT SKILLS

Problem Solving Competencies:

- **Slow Databases:** Optimize slow queries using EXPLAIN, add composite indexes, eager loading, and resolve table deadlocks.
- **Heavy APIs & Reports:** Move heavy computational jobs to Laravel queues & Redis workers, reducing response latency by 42%.
- **Safe Payments:** Payment gateway integrations with webhook signature verification and idempotency keys to guarantee safe execution.
- **Clean & Secure APIs:** Versioned REST APIs secured with Sanctum and JWT for responsive web and mobile clients.
- **Data Synchronization:** Real-time inventory and order sync across POS counters, warehouses, and online stores.
- **Live Features:** Audio/video calling, live chat, and screen sharing using WebRTC, WebSockets, and Redis Pub/Sub.
- **Multi-Tenancy:** Multi-tenant SaaS platforms with database isolation, custom subdomains, and tier management.
- **High-Traffic Scalability:** Docker Compose, Nginx load balancing, Horizon autoscaling, and GitHub Actions CI/CD workflows.

Domain & Enterprise Expertise:

- **Multi-Branch ERP & POS:** End-to-end retail POS, stock movement, barcode integration, and procurement.
- **SaaS Subscription Platforms:** Multi-tenant company isolation, tier-based feature flags, and billing.
- **Accounting & Billing Modules:** Ledger accounting, customer/supplier dues, payment vouchers, and expense tracking.
- **Third-Party API Ecosystem:** Payment gateway integrations, SMS gateways, courier APIs, and webhook processing.
- **High-Volume Reporting:** Real-time BI dashboards, automated Excel/PDF generation, and audit logging.

Core Engineering Strengths:

- Clean Code, SOLID Principles, and Refactoring
- End-to-End Product Lifecycle Ownership (SDLC)
- Asynchronous Event-Driven Architectures
- Docker Containerization & Linux VPS Administration
- Database Schema Modeling, Indexing & Query Tuning
- Comprehensive Automated Testing (PHPUnit) & Agile/Scrum

EDUCATION

2021

Diploma In Electrical

Patuakhali Polytechnic Institute

Barisal, Bangladesh

MY SPECIAL PROJECTS

BNSMSoft - Multi-Tenant SaaS ERP, POS & Business Suite

Tech: Laravel, MySQL, Redis, Horizon Queues, Docker, RBAC, Multi-Tenant

- **SaaS & Subscription:** Architected a multi-tenant platform with database isolation, subdomains, and tier-based feature management for each client company.
- **Core ERP Modules:** Developed modules for inventory tracking, sales orders, accounts payable/receivable, multi-currency invoicing, and BI analytics.
- **Background Queues:** Processed background reports and notifications asynchronously via Redis Queues and Horizon; configured automated Docker CI/CD deployment pipelines.
- **Security & RBAC:** Implemented granular role-based permissions, audit logs, and secure tenant data separation across all micro-modules.

Real-Time Audio/Video Calling & Live Chat

Tech: Laravel, WebSockets, WebRTC, Socket.io, Redis, Tailwind CSS

- Built 1-on-1 WebRTC audio/video calling with custom signaling, ICE candidate exchange, and low-latency screen sharing.
- Engineered real-time chat supporting active presence status, typing indicators, and delivery receipts using Redis Pub/Sub.
- Implemented automatic socket reconnection and JWT-authenticated WebSocket connections to secure channel access.

Construction Operations & Site Logistics ERP

Tech: Laravel, PHP, MySQL, REST APIs, Tailwind CSS, Cloud VPS

- Built operations hub for managing subcontractors, machinery leasing, site requisitions, inventory transfers, and biometric daily attendance.
- Developed real-time REST APIs delivering metrics, budget variances, and site safety alerts to mobile applications.
- Streamlined communication and approval workflows between field supervisors and central warehouse managers.

Manufacturing, Factory Workflow & Inventory ERP

Tech: Laravel, PHP, MySQL, Redis, DataTables, Bootstrap

- Created workflow engine tracking production stages, vendor accounts, raw material procurement, and requisition approvals.
- Designed database structures automating inventory deductions, inter-warehouse transfers, and maintenance schedules.
- Built financial dashboards for analyzing production cost variance, with bulk Excel and PDF reporting features.

Omnichannel E-Commerce & Retail POS Sync

Tech: Laravel, MySQL, Payment Gateways, REST APIs, Webhooks

- Synchronized offline retail POS counters with online store inventory in real-time to avoid overselling.
- Implemented two-way API synchronization to consolidate external channel sales into a unified fulfillment dashboard.
- Integrated secure multi-payment gateway solutions featuring automated webhook validation and instant refund processing.

EduTab – School Management & High-Concurrency Result Engine

Tech: Laravel, PHP, MySQL, Redis, Queue Workers, GitHub Actions

- Engineered a comprehensive school management SaaS platform handling student admissions, fee collections, and automated report card generation.
- Architected a high-concurrency result processing engine capable of generating thousands of transcript marksheets simultaneously.
- Implemented Redis caching layers and chunked queue processing reducing database load during peak publication traffic by over 60%.

Automated Courier & Logistics Dispatch Engine

Tech: Laravel, MySQL, Redis, REST APIs, Webhooks, Linux VPS

- Engineered automated dispatch engine integrating third-party courier APIs with instant consignment booking and label printing.
- Implemented asynchronous webhook listeners and Redis background queues for real-time parcel tracking and automated status updates.
- Automated Cash-on-Delivery (COD) ledger reconciliation and parcel return tracking with warehouse inventory systems.
